

Nucleus	The brain of the cell. Controls the cells functions. Has DNA inside it.
Cytoplasm	Gel like substance that holds the other organelles in place.
Cilia	Tiny tubes that look like hairs. Used to sense and to move the cell.
DNA	DNA is the building block of life. Contains all the information needed to develop life.
Mitochondria	The cell's power supply. Uses food absorbed by the cell to create energy.
Cell membrane	Allows nutrients into the cell and wastes to pass out of the cell (but not the other way around).
